Subject: Re: Invite for chemical recycling workshop at SPC Impact
Attachments: ATT00001.txt

Hi Cheryl,

We decided we will look into doing the workshop remotely and think we should have the technology set up to do it more or less as planned. We are planning for April 8th at 1 pm est for 75 minutes. I really hope you can join us then! I will circle back with an invite.

I was thinking in a future meeting, as a follow up to this workshop, perhaps you may want to present on the EPA side about recycling definitions, and conversations going on between national bodies, states and regions re chemical recycling and how it fits in. That is of course, if you think there is something important there worth presenting on. But I would love to help elevate any work you all are doing to industry with this group.

Thanks and hope you are doing well and staying safe in these crazy times!

Hi Cheryl,

I'm glad this peaked your interest, I was hoping to get you involved! I am not sure if we will postpone this all the way to our fall meeting, more likely we will do something virtually. We are brainstorming now to figure out what the best options are. I will definitely keep you in the loop.

Perhaps you and/or your colleagues might be willing to give us an update in a future meeting on what the status of conversations at EPA are on this topic? We would also like to get Sego Jackson to present to us from Seattle Public Utilities, as they recently developed an alternative waste hierarchy. We might explore a series of these types of presentations/conversations. I welcome any thoughts you have on what you would find most interesting/useful.

Thanks for reaching out about it and will get back to you on our thoughts for next steps as we work out the details.

Subject: Invite for chemical recycling workshop at SPC Impact

Hi Brandon, Cheryl and Ronald,

I am excited to see you are attending SPC Impact! My name is Tristanne and I lead SPC's Collaborative on multi-material flexible packaging at the SPC. We have been discussing chemical recycling and the waste hierarchy for multi material flexibles and will be hosting a workshop on this topic at SPC Impact in Austin.

I wanted to reach out and invite you to join us for the workshop if any of you are interested and able to. One of the possible outputs for the workshop is to provide insights for policymakers when they debate whether or not to define chemical recycling as recycling. I think it would be really valuable to have your perspective as part of the conversation. I have attached a workshop summary for your reference.

The workshop will be Tuesday morning 3/31 at 10:45am. Let me know if you can join us!

Best,

Tristanne
